

Schaerer Coffee Soul makes the hearts of restaurateurs beat faster

The first coffee machine of the new generation unites an athletic yet elegant design with a number of refined technical features

Zuchwil, 16.03.2016 – With the Schaerer Coffee Soul, Swiss coffee machine manufacturer Schaerer is launching the pioneer of the new coffee generation. The 33 centimetre slim fully-automatic coffee machine is based on a newly-developed platform and offers advanced technology packed in an athletic yet elegant design. A true innovation is the patent-pending Uptime! descaling system, which stands out due to its simple application. In addition, the touch display has been further developed and the beverage display has a more attractive design. For milk foam as if it were made by a barista as well as the highest beverage quality and largest variety of drinks, the Best Foam milk system is available by default. The Schaerer M2M Coffee Link telemetry system is available as an option and enables real-time data evaluation as well as location-independent access to the coffee machine. The Schaerer Coffee Soul will be available starting in spring-2017 and, with a cup quantity of 180 a day, is perfectly suited for small restaurants and coffee bars. Furthermore, it offers an interesting concept for office use.

A new 8" touch display for even clearer operation

Whether for operation by staff or for self-service, for example in offices, the 8" touch display of the Schaerer Coffee Soul behind a generous glass surface with an even more attractive beverage design will draw all eyes to it. "The design with larger icons and writing as well as the clear menu guidance enables intuitive operation, both for beverage configuration and individualisation and for the selection of the desired beverage", explains Inga Schaeper, Head of Marketing & Coffee Competence Centre at Schaerer AG. Depending on the equipment and modifications, more than 200 different coffee/milk specialities can be stored in operating mode. The display can be converted and assigned a quick-selection program for up to 12 beverages for self-service use.

Newly patented Uptime! descaling system

Not only the design, but also the technical equipment of the Schaerer Coffee Soul will make the hearts of restaurateurs beat faster. An innovation developed by Schaerer for the new coffee machine is the patent-pending Uptime! descaling system: It makes descaling possible at any time by the staff, therefore preventing scale-related malfunctions. Simply insert a cartridge and leave the machine to descale on its own. The coffee machine is ready for use again within a very short amount of time - when the descaling process is started at night, the machine is ready for service first thing in the morning, meaning it won't interrupt service. Moreover, the Coffee Soul scores points with an automatic cleaning program for the coffee and milk system. The bean

and topping hoppers attached to the machine can simply be removed for cleaning. An automatic locking mechanism prevents the coffee beans or topping from pouring out.

Equipment for the entire world of coffee drinking enjoyment

Thanks the Best Foam milk system integrated by default, the Schaerer Coffee Soul offers hot and cold milk foam as if it were made by a barista and thereby the highest quality of beverages when preparing coffee/milk specialities, even at the mid-range performance level. Another special feature of the Coffee Soul: The milk pump has been integrated into the coffee machine for the first time so the customer can decide whether to set up the side cooling unit on the left or the right. Furthermore, combination with an under-machine cooling unit is also possible. Up to two bean hoppers with 1200 grams of capacity each as well as a topping container for chocolate and milk powder can be positioned on the coffee machine. The coffee machine is compatible with all common cash register and payment systems.

M2M Coffee Link for evaluation as well as remote diagnosis and access

The Coffee Soul can be equipped with the Schaerer M2M Coffee Link telemetry solution in order to evaluate all relevant data having to do with machine state, product supply, beverage statistics, extraction times, etc. It delivers information in real-time and supports the operator in adapting and filling out offers on time or initiating service or maintenance processes. Furthermore, the Coffee Soul is one of the first Schaerer coffee machines equipped for bi-directional data transmission. This makes possible location-independent access, for example to adjust recipes and extraction times or to start price campaigns on several coffee machines at the same time from a central location.

Schaerer AG

Founded in 1892 and headquartered in Zuchwil, near Solothurn, Switzerland, Schaerer AG is one of the world's leading manufacturers of fully automated professional coffee machines and offers the right solution for any feature or performance requirements. Schaerer AG is internationally represented by subsidiaries in Germany, Belgium and the USA and by over 70 partners around the world. Customers all over the world value Schaerer products for their ease of use, the large selection of beverages available at the touch of a button and the excellent coffee quality. Numerous innovations, including the revolutionary, patented Best Foam milk system underscore the pioneering approach of the company. The company's claim of "Coffee comes to life" stands for creating coffee enjoyment that leaves a lasting impression. With its "Barista inside" motto, Schaerer combines coffee machine technology and many years of coffee expertise with the skill of a barista: inside the coffee machines, all details interact perfectly to prepare beverages that are on par with the hand-made creations of a barista, both in terms of their taste and appearance.
